DETAILED ACTION

1. Applicant's 11/21/06 Amendment, which added new claim 80, and elected without traverse of Group A (gamma ray energy range of between 3 and 4 MeV) and species of U-235, is acknowledged.

Based on applicant's elections, claims 71, 72, 74, 77, 79 and 80 read on the elected invention. Claims 4, 5, 8, 10-12, 15, 19, 24, 27, 30-60, 70, 75, 76, and 78, which are drawn to a non-elected invention are withdrawn from consideration.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 71, 72, 74, 77, 79 and 80 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for an observed effective half life of approximately 20-30 seconds, does not reasonably provide enablement for an observed effective half life of approximately less than approximately 20-30 seconds. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make/use the invention commensurate in scope with these claims. Note that the specification states that for an irradiation period of 30 seconds with neutrons in the energy interval of 3-4 MeV, a gamma ray half life of 25 seconds is observed (see paragraphs 0044-0046 of the specification).

Art Unit: 3663

3. Claim 79 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

There is no support in the specification for the claimed detector efficiency of 10%.

4. Claims 71, 72, 74, 77, 79 and 80 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The new matter pertains to an observed effective half life of approximately less than approximately 20-30 seconds. See also section 2 above.
